There is a family tree in the book which begins:

“The family is supposedly direct descendents of Rostang (Rostaing, Rostan) d’Ancézune family of Provence and Comtat Venaissin (11th – 18th century). The Family includes poets, writers, inventors, courtiers, bishops, dukes. Other noblemen and even a saint (Child of the Tropics, page 134). The line became extinct in 1767. In 1750 Léon de Rostang d’Ancézune married Adele du Four de St Martial. They had seven sons. The family had been ruined by terrorism and agrarian disturbances which prevailed in the Papal State of Avignon just previous to the revolutionary outbreak in France. Several of the sons emigrated, one of whom was Maurice de Rostang. Leaving Marseilles about the year 1790, he went to Trinidad [another source says he arrived in 1787], which at the request of Pope Pius VI, had been opened by the King of Spain for colonization and especially for Catholics who had suffered by the troubles of the time. [These revolutions were also effecting the French Islands of Haiti, Martinique, and Guadeloupe, and all the other islands belonged either to England, with whom France was at war, or to Spain, which allowed no foreign settlers, except Trinidad which encouraged settlement after the Cedula of 1783.”
