Green Fir Mart Slow

EUGENE (AP) — The green fir lumber market remains "dismal," but plywood has shown a "surprising recovery," the weekly lumber market news letter, Random Lengths, said Saturday.

Heavy stock remains the sole bright spot in the green market, the report said, as low demand continues in the eastern United States, despite better weather and more favorable building conditions.

Most plywood plants have enough orders to keep them busy through May, the report said, although prices are still below last year. Buyer resistance has stopped mills from raising the price beyond \$72 on quarter-inch AD stock.

Pine production last week exceeded sales and shipments for the first time in several months, the report said.
