

Introduction

The description shown below was for the original version of "Forest of Trees", however, several of the chapters have been removed and are now separate eBooks available in this privatized eBook library.

The chapters in this book consist of family trees for the respective families that appear as the second or third generation of the tree. The first entry is a Branch entry if multiple branches are used, or a 00Root-NAME. The 00Root-name method is used when a single name tree is developed and there are several sub-trees with the same surname but the lineage back to the main tree is unknown. Care must be taken when using these trees as the lineage may not be correct. Notes have been added to indicate that a person is being attached temporarily until the proper lineage is determined.

The first trees are from the 00Root-Krause line. The individual branches are from different family groups with the surname of Krause/Kraus/Krauss/Kruse/and other variations of spelling of the surname Krause. These families are not related by blood or marriage to the other individuals in the database. The main purpose of including them is to try and determine their lineage as far back as possible and see if they do connect to a common root. If this helps others to determine their lineage then that is the main purpose for including them in this document.

The next trees are arranged alphabetically and are:

ANDERSON: This tree consists of two branches, both from the 1851 census for St. James Parish, Charlotte Co., NB. (Andersonville)

ANDREWS: This tree consists of the descendants of the ANDREWS line from Norfolk County, England.

APPLEBY: This tree consists of two branches. First one from Northumberland Co. and the second one from Charlotte Co., NB
